3+ YEARS OF EXPERIENCE	2025 GRADUATED — TECHNICAL DEGREE IN IT	100% ADOPTION OF SYSTEM IN PRODUCTION	3 DEGREES IN PROGRESS
---------------------------	--	--	--------------------------

SUMMARY

Front-End Developer who builds business software that improves operational efficiency. Three years of practical experience with React.js, TypeScript, JavaScript, HTML5 and CSS3, turning manual operational processes into production software used daily by entire teams. Built and shipped the front end of an internal ERP unifying three legal entities, integrating REST APIs and real-time Firestore synchronisation, and reduced interface load time by 40%. Now Director of Information Technology at the same company, remaining hands-on in the codebase while leading software architecture, digital transformation and an AI digital workforce initiative. Currently pursuing a B.Sc. in Computer Science at University of the People (United States).

ENGINEERING IMPACT

- Own the front end of the system the company runs on — a React.js and TypeScript single-page application in production, used daily by 100% of the operations team across three legal entities, specified, built and shipped solo.
- Made the build-versus-buy call, then executed it: chose to build the ERP in-house over licensing an off-the-shelf platform. It now covers inventory, pricing and internal communication with no vendor dependency.
- Turned the company's slowest manual process into its fastest: product pricing went from 10–15 minutes of manual calculation to under 30 seconds.
- Built the component layer the platform runs on — a design system and reusable React component library that every module ships against.
- Leading Cortex, the company's AI initiative: a layer over the ERP with a live integration, incremental synchronisation and 226,296 records imported — the foundation for agents that take over repetitive administrative work.

CORE EXPERTISE

FRONT-END React.js · Next.js · JavaScript (ES6+) · TypeScript · HTML5 · CSS3 · Tailwind CSS · Framer Motion	WEB DEVELOPMENT Responsive Web Design · Web Performance · Component-Based Architecture · Design Systems · SPA · SSR · Cross-Browser · Internationalization
APIS & DATA REST API Integration · Real-Time (Firestore) · JWT Authentication · Node.js · Express.js · Prisma · PostgreSQL	SOFTWARE & SYSTEMS Software Architecture · Internal Systems · Business Applications · Requirements Gathering · Technical Leadership · Technology Decision-Making
AI & AUTOMATION AI Agents · AI-Driven Process Automation · Workflow Automation · Digital Transformation	TOOLS & PRACTICES Git · GitHub · VS Code · Figma · Jest · React Testing Library · Clean Code · Debugging · Code Review

PROFESSIONAL EXPERIENCE

Zenith Lacres Industrial sealing manufacturer · 3 legal entities · 22 years in market · São Paulo, Brazil	
Director of Information Technology Hands-on Software Development · Front-End Architecture · Internal Systems · AI Automation <i>Promoted from Front-End Developer</i>	2025 – Present
- Write production code weekly — React.js, TypeScript and the REST API integration layer of the internal platform — while leading technology strategy across three legal entities. - Define the software architecture and front-end technology standards used across all internal applications: component-based architecture, shared design system, and REST API integration patterns. - Lead an AI digital workforce initiative, designing AI agents that automate repetitive administrative tasks to reduce manual work and increase operational efficiency. - Direct the development of internal systems that replace manual processes end to end — from requirements gathering with business stakeholders to shipped, adopted software. - Own technology decision-making for the company's digital transformation, including build-versus-buy calls such as developing the internal ERP in-house rather than licensing an off-the-shelf platform.	
Front-End Developer	2023 – 2025
- Developed the front end of an internal ERP with React.js and TypeScript — a single-page application with real-time dashboards, permission-aware navigation and REST API integration, now used daily by 100% of the operations team. - Implemented real-time internal chat over Firebase Firestore, eliminating a recurring third-party messaging subscription. - Built and maintained a custom design system and reusable React component library, standardizing the UI across every module of the platform. - Built the dynamic pricing interface with automated cubic-weight calculation and the real-time inventory dashboards consuming REST APIs. - Developed responsive, cross-browser web interfaces from Figma designs, ensuring consistent behavior across desktop and mobile.	

- Optimized component rendering and asset delivery across the company's web interfaces, reducing load time by 40%.
- Collaborated with business teams on digital initiatives, launching the company across 5 online marketplaces and growing digital revenue from R\$0 to R\$10,000 in 3 months.

SELECTED PROJECTS

Enterprise Operations Platform (Internal ERP)

2025 - 2026 · In production

React · Vite · Node.js · Express · Prisma · PostgreSQL · Firebase · JWT

- Problem: three legal entities sharing one warehouse tracked stock in disconnected spreadsheets — untraceable movements and 10–15 minutes of manual work per price quote.
- Architecture: a React SPA over a decoupled Express REST API; real-time chat on Firestore; JWT with role-based access; a PostgreSQL model through Prisma, where a stock movement and the balance it changes are written in one transaction so the two can never disagree.
- Impact: full traceability, 60% faster inventory counts, pricing under 30 seconds, one paid communication tool removed, 100% adoption by the operations team.

Cortex — AI layer over the ERP

2026 · Platform in homologation

Anthropic Claude API · Third-party ERP integration · Incremental sync · Multi-company

- Data layer over the company's commercial ERP (Deltaze) with no privileged schema access: 9 queries, 226,296 records, incremental synchronisation keyed on natural keys, multi-company coverage.
- Reasoning on Anthropic's Claude API, kept independent of the data layer so the model can be swapped without touching the ERP integration.
- Platform in homologation; agents (receivables, commercial, purchasing, executive) in development, under the rule that nothing critical executes without human approval.

Full-Stack Web Application — Graduation project

2025 · Delivered solo, top grade

Next.js 15 · React 19 · TypeScript · Tailwind CSS · MDX

- Owned 100% of the interface — layouts, component structure, navigation flow and responsive behavior — integrated with the back end built in the same project on Next.js and Prisma.

Personal portfolio

2026 · Live

Next.js · React.js · TypeScript · Tailwind CSS · Framer Motion

- Next.js App Router with statically generated internationalized routes (EN/PT/ES), a design system built from scratch, and a technical engineering documentation section.

EDUCATION

B.Sc. Computer Science (in progress)

University of the People — Pasadena, California, USA

2026 - present · Online

B.Sc. Information Systems (in progress)

UNASP — São Paulo, Brazil

2026 - 2029
